

Water-Jetting Produces Clean, Safe Work Environment

Yaphank, NY: WRS prides itself on providing solutions to their customer's needs. For one such customer, years of manufacturing had left a substantial amount of grit and grime on their plant floor. This was no match for the Industrial Services team of WRS.

Under the guidance of Bob Diaz, the WRS team used a 10,000psi Hydro Blasting floor cleaning machine attached to an industrial Vacuum truck (to contain the cleaning liquids and remove all dislodged materials) to transform years of wear and grit to a clean, safe, work friendly environment.

The dramatic change and positive feedback from our customer's employees has led to additional work opportunities.
